Ex. 6 Personal Privacy (PP)

You recently contacted the Environmental Protection Agency (EPA) concerning your exposure to C8 from the Tuppens Plain Water Supply. As you may be aware, EPA has issued three Orders to DuPont to specifically address human exposure to potentially endangering levels of C8 in public and private drinking water supplies in the vicinity of the Washington Works facility. The most recent Order, issued in 2009, requires DuPont to provide treatment (or alternate water) for any public or private water supply in the area which exceeds EPA's provisional health advisory of 0.40 part per billion (ppb) for C8. Our records indicate that the Tuppens Plain water wells have been treated with carbon filtration since April 2006. DuPont was required to install the treatment in accordance with a civil class action settlement agreement which preceded EPA's latest action. After treatment samples have consistently been non detectable for C8. The raw (untreated) water from the Tuppens Plain wells has typically been below 0.1 ppb C8. Therefore, your exposure prior to April 2006 has been relatively low. Since then, your exposure from the Tuppens Plain drinking water supply was essentially zero. The following website provides some relevant information on the various health effects from exposure to C8. A three member science panel was formulated under the civil action to study a wide array of health effects. I hope this response has addressed your concerns. Please contact me if you have additional questions.

COMMENTS_OF_REQUESTOR

hello, A few years back we had some problems with the tupper's plains water and come to find out they called it c-8? what does that mean. I have lived in Stewart all of my life and drank that same water for years. Somebody's knows how long it's been in the water what kind of effect will this have on a person? I am 32 yrs old and if you could help me with the questions I would be very glad.
